DETAILED ACTION

Drawings

1. Figure 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The abstract of the disclosure is objected to because reference characters should be in parenthesis. Correction is required. See MPEP § 608.01(b).
3. The disclosure is objected to because of the following informalities: the headings for each section should be changed to the ones provided in 37 CFR 1.77(b).
- Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3673

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Downes (US Patent No. 6,029,980).

Regarding claim 1, the Downes reference discloses a reciprocating seal (12) that is provided in an annular space formed between a shaft and a housing (Col. 3, Lines 21-23), which move relatively to each other in a direction of the shaft (Col. 3, Line 66 - Col. 4, Line 4), and has a seal lip (10) brought into sliding contact with a surface of the shaft (Col. 3, Lines 53-65),

wherein the seal lip has a two-step lip structure (Fig. 2) in which a plurality of protrusions (38) extending in the direction in which a main seal lip (14) relatively moves with respect to the surface of the shaft are formed on a surface of the lip of a second step (Fig. 2).
